

ABSTRACT OF THE DISCLOSURE

A camouflage net structure is comprised of a net, a mosquito screen and a hat. Wherein the net is decorated with camouflage materials, the mosquito screen is sewn inside of the net for preventing mosquito entry. The hat is sewn inside of the mosquito screen and to be covered on user's head. In this manner, the camouflage not only can prevent the user from mosquito bite but also it will not be slid from the user's body even when the user is running with the camouflage net on.
